PROFESSIONAL SUMMARY

Full-stack engineer with 2+ years building large-scale operations platforms supporting 5,000+ facilities across global logistics networks. Specialized in Java/Spring Boot backend systems, Redis caching, and event-driven architectures, with a track record of reducing operational inefficiencies and scaling data ingestion pipelines. Experienced in owning end-to-end delivery across backend, frontend, and production systems.

WORK EXPERIENCE

FedEx Corp (Software Engineer II)

Dec 2025 – Present

Java, Spring Boot, Junit, Jenkins, GitHub Copilot

- Built and shipped core platform features for an operations management system used across **5,000+ facilities** throughout North America and Europe
- Owned **end-to-end delivery** of features across backend, frontend, caching, messaging, and production deployments
- Led European operations rollout by executing production data loads for **350+ facilities**, coordinating across 3 teams to ensure zero data gaps at launch
- Designed and shipped a scheduling management system enabling coordinators to configure daily operational defaults, reducing manual setup across facilities
- Led cross-team release of **4 major features**, aligning dependencies across 3 teams to deliver **on schedule with zero regressions**
- Drove adoption of AI-assisted development (GitHub Copilot) **across 25+ engineers**, standardizing development workflows

FedEx Corp (Software Engineer)

Jun 2024 – Dec 2025

Redis, Java, Spring Boot, Angular, Typescript, Jenkins

- Introduced a Redis caching layer to surface real-time UI states, eliminating data inconsistencies and reducing operations support escalations by **90%**
- Built scalable Java/Spring Boot APIs for bulk CSV ingestion, enabling operations teams across **25+ European countries** to onboard facility data and eliminating **100+ hours of manual data entry per batch**
- Developed an Angular-based scheduling calendar UI, **used by 500+ facility managers** for daily planning and operational monitoring

FedEx Corp (Software Engineer Intern)

Jun 2023 – Aug 2023

Java, Junit, Oracle SQL, Angular, Typescript

- Optimized routing calculation workflows by consolidating multiple database queries, reducing response latency from **10s** → **3s** and accelerating batch retrieval and processing
- Built Angular features for **real-time scheduling and monitoring**, improving daily visibility for facility managers managing shift and route planning

PROJECTS

[Twitter/X Engagement Agent: AI-Powered Social Media Agent](#)

Mar 2026 – Present

Python, LangGraph, Postgres, Claude API, OpenAI embeddings

- Built a semi-autonomous AI agent that processes **500+ tweets/run** to identify high-value engagement opportunities for software engineers
- Reduced manual reply composition time by **90%** and improved recommendation relevance by using **LLM-based ranking and feedback loops**
- Designed a multi-user backend with **Postgres + pgvector**, semantic search, and Slack integration with per-run cost controls (<\$0.10/run)
- Implemented **rate limiting, retries, and batching strategies** to handle API constraints and ensure reliable large-scale processing

[ESMON: Indian Railway Speed & Energy Analytics Platform](#)

Jan 2026 – Present

Java, JavaFX, Maven, Spring Boot, Junit, Windows/macOS

- Built a desktop analytics platform for parsing **binary locomotive data** and generating PDF reports to help railway managers detect speed and energy anomalies
- Designed an **offline-first cross-platform architecture** using SQLite for deployment in low-connectivity railway environments used by non-technical operators

SKILLS

- Languages:** Java, TypeScript, Python
- Backend:** Spring Boot, REST APIs, Redis, Event-driven systems
- Frontend:** Angular, React, Next.js, JavaFX
- DevOps:** AWS (Certified Cloud Practitioner), GitHub Actions, Jenkins, Docker
- AI/LLMs:** GitHub Copilot, LangGraph, OpenAI embeddings, Claude API

EDUCATION

University of Wisconsin-Madison

May 2024

Bachelor of Science, Computer Science and Data Science (with Distinction)

GPA: 3.93

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Intro to Data Science Programming, Machine Learning
