SUMMARY

Backend leaning fullstack engineer building AI-powered autonomous agents with LangGraph, Python, and Typescript. Experienced with enterprise systems at scale, with a deep focus on AI-assisted and agentic engineering.

PROJECTS

Twitter/X Engagement Agent: AI-Powered Social Media Agent

Mar 2026 – Present

Python, LangGraph, Postgres, Claude API, OpenAI embeddings, Supabase

- Grew an AI discovery agent to **6 active users and growing**, reducing their research time from hours of manual scrolling to minutes of one-tap Slack approvals, by surfacing only conversations matched to each user's expertise.
- Raised recommendation relevance from **~25% to 75%+** within six weeks, by engineering a zero-config feedback loop that self-tunes ranking across five learned preference signals.
- Surfaced the **7/150 posts per run**, by architecting a LangGraph pipeline (search, filter, rank) that pairs LLM query generation with embedding-based similarity scoring.
- Held cost under **\$0.05 per run**, by implementing atomic per-user budget controls with spend checks, rate limiting, and write-before audit logging.
- Eliminated cold-start by auto-generating a usable interest profile on signup from a user's X, GitHub, and web presence, so recommendations are relevant from the first run with no manual setup.

ESMON: Indian Railway Speed & Energy Analytics Platform

Jan 2026 – Present

Java, JavaFX, Maven, Spring Boot, Junit, Windows/macOS

- Delivered v1 as **sole engineer** of a commissioned analytics platform sold with a railway vendor's locomotive hardware, replacing a **legacy system** unable to process the recorders' full data
- Guaranteed evidentiary-grade accuracy of reports that tie **overspeed events to individual drivers**, rejecting whole files on a **single corrupt record**, through invariant validation and atomic imports
- Enabled instant reporting for non-technical operators on **offline, low-end depot machines**, with memory flat on any log size, via streaming binary parsers, import-time analytics, and zero-config installers

WORK EXPERIENCE

FedEx Corp

Full Stack Engineer II | *Java, Spring Boot, Junit, Jenkins, GitHub Copilot*

Dec 2025 – Present

- Powered operations across **5,000+ facilities** throughout North America and Europe by building and shipping core platform features for the operations management system
- Owned **end-to-end delivery** of features across backend, frontend, caching, messaging, and production deployments
- Led European operations rollout by executing production data loads for **350+ facilities**, coordinating across 3 teams to ensure zero data gaps at launch
- Designed and shipped a scheduling management system enabling coordinators to configure daily operational defaults, reducing manual setup across facilities
- Led cross-team release of **4 major features**, aligning dependencies across 3 teams to deliver **on schedule with zero regressions**
- Embedded AI-assisted development into the team's default workflow by standardizing GitHub Copilot practices **across 25+ engineers**

Full Stack Engineer | *Redis, Java, Spring Boot, Angular, Typescript, Jenkins*

Jun 2024 – Dec 2025

- Introduced a Redis caching layer to surface real-time UI states, eliminating data inconsistencies and reducing operations support escalations by **90%**
- Built scalable Java/Spring Boot APIs for bulk CSV ingestion, enabling operations teams across **25+ European countries** to onboard facility data and eliminating **100+ hours of manual data entry per batch**
- Developed an Angular-based scheduling calendar UI, **used by 500+ facility managers** for daily planning and operational monitoring

Full Stack Engineer Intern | *Java, Junit, Oracle SQL, Angular, Typescript*

Jun 2023 – Aug 2023

- Optimized routing calculation workflows by consolidating multiple database queries, reducing response latency from **10s → 3s** and accelerating batch retrieval and processing
- Built Angular features for **real-time scheduling and monitoring**, improving daily visibility for facility managers managing shift and route planning

SKILLS

- **Languages:** Java, TypeScript, Python
- **Backend:** Spring Boot, REST APIs, Redis, Event-driven systems
- **Frontend:** Angular, React, Next.js, JavaFX
- **DevOps:** AWS (Certified Cloud Practitioner), GitHub Actions, Jenkins, Docker
- **AI/LLMs:** LangGraph, OpenAI embeddings, Claude API, GitHub Copilot

EDUCATION

University of Wisconsin-Madison

Bachelor of Science, Computer Science and Data Science

GPA: 3.93

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Intro to Data Science Programming, Machine Learning
